PHONE (253) 627-2910 • 4609 70th Avenue East Fife, WA 98424 • FAX (253) 627-2911

Sampling: Based on Boeing D1-8007/ARP 9013

Calibration: ANSI/NCSL Z540-1, ISO/IEC 17025. All calibration is performed by a 3rd party utilizing standards traceable to NIST.

- Service Steel Aerospace controls our documents and records in accordance with ISO9001/AS9100/AS9120.
- Documents are identified by document number and revision date.
- Records are controlled and maintained to ensure they are readily available and protected from loss, damage and deterioration.
- Record retention is 11 years. Certifications are stored in paper or electronic versions. Electronic data is backed up nightly.
- All customer supplied drawings are not kept up to date and require customer flow down upon revision.
- All acceptance media is controlled and regulated by the Corporate Quality Manager. Returned stamps are placed in bond for a minimum of 6 months.
- All personnel have been properly trained for their positions and verified for competence. Training records are kept on file for each employee and updated as needed.

Management Responsibility:

Top management has established and endorsed Service Steel's quality policy statement:

It is the policy of SSA to review measure our processes, and continually improve quality and customer satisfaction.

Records are on file showing management reviewing the quality management system at planned intervals.

Product Realization:

- Customer orders are reviewed in accordance with controlled work instructions which provide communication plans and risk assessment.
- All purchase orders specify “right of entry” provisions for our customers and regulatory agencies.
- Suppliers are added to the Approved Suppliers List after they have been through an evaluation process and a list of controls has been put into place. Periodic review of suppliers is performed to ensure their continued capabilities.
- All incoming shipment raw material and processing test reports are reviewed for accuracy, completeness, and conformance to requirements prior to release of material for Receiving Inspection.
- All incoming shipments are inspected using an approved sampling plan. No incoming material is released to production unless it conforms to documented material, dimensional specifications, drawings, and/or special test requirements and all inspections and records are approved.
- Both company and customer owned product are verified at the time of receipt and stored in approved methods ensuring identification, traceability and proper preservation.
- Customer supplied resources are stored in a manner to prevent deterioration and damage while in possession of Service Steel.
- Service Steel has implemented and maintains a Foreign Object Debris (FOD) prevention program to ensure our products are free from foreign debris that may cause contamination or damage.
- Service Steel has implemented and maintains a Counterfeit Materials Prevention program.

Measurement, Analysis and Improvement

- Internal audits are performed at regular intervals by qualified auditors independent of the process being audited. Records are maintained and discussed at management review.
- Documented procedures have been established for inspection and test activities in order to verify that the specified requirements for the product are met throughout its realization process.
- Final inspection on all products is performed by qualified inspectors and indicated on the work orders by serialized stamps.
- Non-conforming material is quickly segregated after it has been identified and recorded. The material is controlled to prevent shipping while the appropriate actions are taken per documented procedures.
- A defined corrective/preventive action process has been established and documented. Records of all corrective/preventive actions are maintained and reflect an effective follow-up to be performed. Continual monitoring of corrective/ is performed by top management.
